

PAVILAND® EP AUTONIVELANTE

Coloured epoxy resin for the creation of self-levelling pavements.

DESCRIPTION

Coloured epoxy resin mixed with PAVILAND CUARZO 0,2 or PAVILAND CUARZO 0,3, it is used for the production of self-levelling pavements of low thickness (2 to 4 mm) and high resistance. This product for pavements is easy to apply and provides a very smooth and easy to clean finish. Waterproof in interior floors. Available in a wide range of colours. Among its different uses we can find the ones in food, chemical and pharmaceutical industry or even laboratories.

TECHNICAL CHARACTERISTICS

100% solid two components epoxy resin.

ADVANTAGES AND USES

- High mechanical and chemical resistance.
- Excellent adherence.
- Watery.
- High chemical resistance.
- Wide range of colours.
- Food industry: Milk or meat plants, etc.
- Chemical and pharmaceutical industry.
- Laboratories and aseptic rooms.
- Industrial kitchens.
- Garages.
- Warehouses with liquid spillage.
- Commercial areas.
- Event halls.
- Offices.
- Hygienic cleaning: non-porous surfaces which are easy to clean.
- Not strong smell.
- Low emission of VOC's.
- Low probability of getting yellowish

SUITABLE SUBSTRATES

- Concrete with suitable resistance (25N/mm² minimum compressive strength and 1,5 N/mm² resistance to traction) open porous and light roughness. Please consult our technical department when applying on a different type of substrate.
- Substrates must be resistant enough, stable, healthy and clean. Free of dust, release agents, organic products, etc.
- Before applying any product make sure all holes and / or cracks on the substrate are previously repaired by using products from our PAVILAND or MORCEMREST range.
- It is also advisable to carry out a milling or sanding process of the substrate with the main objective of opening the porous and removing any possible adhered materials such as greases, paints, etc.
- The substrate must be completely dried.
- First apply a primer such as Paviland Primer EP or Paviland EP Base (check the corresponding technical data sheets). The self-levelling layer should be applied before the primer has completely polymerized.

APPLICATION PROCEDURE

- Homogenize component A.
- Pour component B on top of component A and mix them with a suitable mixer at low speed, until getting a homogeneous product.
- Once the resin has been properly mixed, add the PAVILAND CUARZO arid taking into account the chosen granulometry 0,04-0,3 (P. Cuarzo 0,2) or 0,1-0,3 (P. Cuarzo 0,3), according to resin: arid 1/0,5 to 1/1 depending on the thickness and resistance required. Homogenize for two minutes.
- Spread the self-levelling product with the help of a dented trowel until getting a minimum thickness of 2 mm and a maximum of 4 mm. After 10 or 20 minutes, go through the area with a nylon roller uniformly to remove any occluded air and improve levelling.
- After 24 hours approximately, depending on temperature and moisture conditions, you may add a sealing layer of PAVILAND TOP PU with either dull or shiny finish, to improve the cleaning properties of the pavement, its aesthetic properties and its resistance to scratches.

RECOMMENDATIONS

- Do not apply it under 10°C.
- Do not apply it above 30°C.
- Do not apply under the risk of frost, rain, heavy wind or direct sun light.
- Use gloves and protective goggles when manipulating the product. In case of direct skin or clothes contact, clean the area with abundant water and soap.
- Keep away from children.
- Do not add any water to the mixture.
- The substrate must be completely dried.
- The product may suffer some colour changes when exposed to direct UV radiation, however, it does not affect its mechanical or chemical features.
- Any equipment and tools will be cleaned with water immediately after being used. Once the product gets hard, it will only be removed by mechanical means.
- Do not eat or smoke when manipulating the product.
- Empty containers should be removed or thrown according to the current legislation.
- As a consequence of the change in raw materials, the shades of the coloured mortars may vary slightly by batch.
- A preliminary test of the optimal resin-to-aggregate ratio is recommended, according to the required thickness and application conditions.

PACKAGING AND STORAGE

20 (15.8+ 4.2) Kg containers.

Store the product in its closed original package, in cool and dry places, away from direct sun light and under 10-30 °C temperature.

COLOUR RANGE

RAL 1003, 1015, 3009, 3013, 3020, 5012, 5015, 6001, 6018, 6021, 7001, 7032, 7035, 7037, 7038, 7040, 9005, 9016

TECHNICAL DATA

(Statistics results obtained under standards conditions).

Aspects	A: Coloured liquid - B: transparent - yellowish liquid
Approximate density of the mixture	1,45 Kg/dm ³
Ratio of the mixture (A:B)	79 : 21
Resin/arid ratio	1/0,5 a 1/1
Adherence to concrete	> 1,5 N/mm ²
Approximate performance	1,7 Kg/m ² y mm tickness(resin/arid ratio 1/1 self levelling product)
Classification according to UNE-EN 13813	SR C35 F20 B2.0 AR0.5 IR14.7

Time of application

	Temperature	Time
Life of the mixture	+30°C	20 min.
	+20°C	30 min.
	+10°C	50 min.
Initial curing		10 hours
Total curing		7 days
Time for pedestrian transit	24 - 48 hours/ temperature	
Time for light traffic		3 days
Time for heavy traffic		7 days
Waiting time before applying a sealing skin (last coat of the process)		24 hours
Drying time to touch		10 hours

Temps are given according to temperatures of 23°C and 55% relative humidity. Periods of time will be shorter at higher temperatures and longer at lower temperatures.
